

COVID-19 RAPID ANTIBODY TEST

Employers have always played a role in the health and safety of their employees. During this pandemic, employers have an opportunity to embrace this pivotal role and fight against COVID-19 and the impact it has in our community.

Citran Occupational Health can provide employers a strategy to identify risk of infection in the workplace so businesses can confidently return to work while protecting their employees and slowing the spread of the virus. Offering antibody testing is a safety measure to help identify staff who have already recovered from COVID-19 and are less likely to contract the virus and continue to spread it throughout the workplace.

What is the COVID-19 Rapid Antibody Test?

- Instant finger-stick detects the presence of antibodies within 10 minutes
- Measures amount of antibodies/protein in the blood when body is responding to an infection (i.e. COVID-19)

What Do the Results Mean?

- Positive results indicate current and/or past exposure to COVID-19
- Negative results indicate:
 - a. Employee has not been exposed to the virus COVID-19
 - b. Employee might have been exposed but has not yet produced antibodies against COVID-19

Who Should Receive Test?

Symptomatic employees, should contact primary care physician for further instructions on testing

Asymptomatic employees:

- To determine if a patient might be a carrier of COVID-19
- To determine if a patient has been infected with COVID-19 in the past and has developed immunity
